Mandaluyong City, Philippines

Professional Summary

Software Engineer with 4+ years of experience designing and building enterprise web applications, AI-powered platforms, fintech solutions, and SaaS products. Specialized in React, Next.js, TypeScript, and modern frontend architecture, with hands-on experience developing backend services using FastAPI, NestJS, GraphQL, PostgreSQL, MongoDB, and Firebase. Proven track record of delivering scalable, user-centric applications ranging from lending marketplaces and AI workflow orchestration platforms to multi-tenant enterprise systems and white-label products. Passionate about building maintainable software, optimizing user experience, and collaborating across cross-functional engineering teams.

Experience

KreditHero Inc.

Software Engineer

Jul 2025 - Nov 2025 | BGC, Taguig City

- Engineered a visual, no-code AI workflow orchestration platform using React Flow, empowering users to autonomously compose, automate, and manage complex document-processing pipelines.
- Architected a configurable AI document processing engine supporting extraction, validation, and classification workflows for legal and financial documents.
- Developed AI-powered fraud analysis and compliance interfaces that surfaced document classification, risk severity, and page-level evidence to transform manual compliance reviews into efficient exception-handling workflows.
- Implemented pipeline execution monitoring and diagnostic tooling that provided real-time, node-level execution status and failure tracking to accelerate pipeline troubleshooting.

Serino Systems Inc.

Front-end Developer

Apr 2024 - Jul 2025 | Makati City

- Architected a multi-step admissions platform for a private educational institution, implementing state-persistent "Save as Draft" mechanics and resumable application flows to capture long-tail user completions.
- Standardized frontend engineering across multiple client deployments by developing an internal reusable UI component library via Storybook and distributing versioned packages through Verdaccio.
- Implemented dynamic runtime theming for a white-label e-commerce platform, enabling diverse client brands to share a single, optimized core codebase while maintaining distinct brand identities.
- Eliminated manual development bottlenecks in document generation by engineering a dynamic certificate generation system powered by backend-managed HTML templates instead of hardcoded frontend layouts.

Vashcorp Inc

Front-end Developer

Nov 2023 - Mar 2024 | Cubao City

- Spearheaded the ground-up development of a Next.js/TypeScript fintech platform, establishing the foundational architecture for BNPL, salary loans, and merchant services.
- Integrated PayMongo and financial institution APIs to support secure, real-time bank account linking, e-wallet connections, and automated payment processing workflows.
- Engineered a high-security, multi-step KYC onboarding flow integrating biometric face matching and ID verification workflows to ensure strict regulatory compliance and mitigate fraud risk.

Volenday Group

Front-end Developer

Nov 2021 - Nov 2023 | Makati City

- Owned frontend development for a large-scale Governance, Risk, and Compliance (GRC) platform, designing clean data management interfaces, complex relationship mapping modules, and automated report export workflows.
- Migrated multiple client applications from React.js to Next.js, leveraging SSR, SSG, and ISR while improving performance, responsiveness, and long-term maintainability.
- Engineered and maintained multiple cross-platform Flutter applications for high-traffic e-commerce and product catalog systems, implementing advanced multi-attribute filtering and real-time product comparisons.
- Built reusable features on top of internal SDKs and component libraries, accelerating development across multiple client projects.

Raksquad Tech Corp.

Software Engineer

Jul 2021 - Sep 2021 | Mandaluyong City

- Maintained and enhanced a production-level voucher management platform built on PHP, CodeIgniter, and jQuery, accelerating administrative back-office workflows and resolving responsive layout defects.
- Enforced database scalability and data consistency by successfully normalizing a legacy production MySQL database, decoupling address data into a dedicated relational table, and refactoring downstream application queries.

Village88

Software Engineer Intern

Mar 2021 - May 2021 | San Fernando City, La Union

- Completed an intensive full-stack software engineering program covering JavaScript, Node.js, Express.js, MySQL, Socket.io, and modern web development practices.

Selected Projects

Sala — Full-Stack E-commerce Platform

Live Demo: <https://sala-eta.vercel.app/>

- Built and deployed a production-style full-stack e-commerce platform using Next.js, NestJS, GraphQL, and PostgreSQL featuring authentication, search, filtering, shopping cart, checkout, user profiles, and order tracking.
- Currently deployed on Vercel with a NestJS backend hosted on Render and PostgreSQL on NeonDB. Payment integration and additional commerce features are under active development.

Education

Saint Louis College - City of San Fernando La Union

Bachelor of Science in Information Technology

2022

Skills

Frontend: React, Next.js, TypeScript, JavaScript, Flutter, Tailwind CSS, React Flow

UI & Design: Storybook, shadcn/ui, Mantine UI, Ant Design, Chart.js, Figma

State Management: Redux, Zustand, TanStack Query

Backend: Node.js, Express.js, NestJS, GraphQL, FastAPI

Databases: PostgreSQL, MySQL, MongoDB, Prisma ORM, Firebase

Tools: Git (GitHub, GitLab, Bitbucket), Docker, Jest, React Testing Library, Jira, Vercel, Render
